PROJECTS

RUL for lithium-ion battery

31 Jan, 2025 - 28 Jun, 2025

Mentor: Dr . Vrushali Waghmare | **Team Size:** 4

Key Skills:

deep learning | iot integration | data collection | team work | Time Management | Team Leadership | ML Prediction | problem solving

This project predicts the Remaining Useful Life of Lithium-Ion batteries by monitoring key parameters like voltage, current, and temperature using a Battery Management System (BMS). The collected data is analyzed with machine learning models to estimate how long the battery will last before it needs replacement, helping improve battery maintenance and prevent unexpected failures.
